PURPOSE/POLICY:

Gloves must be worn when it is anticipated that the hands will be in contact with mucous membranes, non-intact skin, tissue, blood, body fluids, secretions, excretions, or equipment and environmental surfaces contaminated with the above.

Gloves are not required for routine health care activities in which contact is limited to intact skin of the resident (e.g. taking blood pressure, bathing and dressing the resident). Compliance with hand hygiene should always be the first consideration.

Indiscriminate or improper gloves use has been linked to the transmission of pathogens. Gloves are task specific and single use for the task. Re-use of gloves has been associated with transmission of methicillin-resistant *Staphylococcus aureus* (MRSA) and Gram-negative bacilli.

PROCEDURE:

Appropriate Glove Use:

- Select glove appropriate to task. It is important to assess and select the best glove for a given task. Selection of gloves should be based on a risk assessment of: the type of setting; the task that is to be performed (e.g. invasive or non-invasive); the likelihood of exposure to body substances; the anticipated length of use; and the amount of stress on the glove.
- Wear the correct size of gloves.
- Gloves should be put on immediately before the activity for which they are indicated.
- Clean hands before putting on gloves for a clean/aseptic procedure.
- Gloves must be removed and discarded immediately after the activity for which they were used.
- Hand hygiene must be performed immediately after glove removal.
- Change or remove gloves after touching contaminated site and before touching a clean site or the environment
- Do not wash or re-use gloves
- The same pair of gloves must not be used for the care of more than one resident

Gloves and Hand Hygiene:

Because gloves are not completely free of leaks and hands may become contaminated when removing gloves, hands must be cleaned before putting on gloves for an aseptic/clean procedure and after glove

removal. Gloves must be removed immediately and discarded into a waste receptacle after the activity for which they were used and before exiting a resident environment.

Gloves may be adversely affected by petroleum-based hand lotions or creams.

To reduce hand irritation related to gloves:

- Wear gloves for as short a time as possible
- Ensure hands are clean and dry before putting on gloves
- Ensure gloves are intact and clean and dry inside
